

Heated Insulation Jackets

Thermon manufactures a wide range of insulation jackets which are supplied with integral heating cables. These units are manufactured to suit each individual application. They facilitate quick and easy removal of the complete assembly for maintenance.

An integral heating cable is used to maintain the equipment at the required temperature, which may vary from freeze protection to high temperature process maintenance.

Each unit may be supplied with a trace heating power connection junction box or thermostat to provide temperature control.

The units may also be used within Hazardous areas, as all of the trace heating materials hold ATEX hazardous area approvals.

The insulation blanket is manufactured from silicone coated cloth on the inner and outer faces, with 50mm thick mineral wool inner insulation. Quick-release fasteners and draw straps secure the unit in place.
